                                                                                                                                                                                                                                                                                                                                                                            tumour endothelial marker (TEM) process selected from ABB90732, ABB90740, ABB90749, ABB90750 and ABB90769. The antibodies which bind to TEM proteins have cytostatic, immunostimulant and antiangiogenic activity. They are useful for inhibiting tumour growth, neoangiogenesis in subjects retinopathy, rhematoid arthritis and psoriasis. Human, mouse and rat TEM genes and the encoded proteins (ABL92075-ABL92141 and ABB90721-ABB90789) are disclosed, as are marker oligonucleotide sequences: tumour endothelial markers (TEM) ABL92042-ABL92041 and ABL92191; normal endothelial markers (NEM) ABL92042-ABL92041 and ABL92191; normal endothelial markers (NEM) ABL92042-ABL92044; and pan-endothelial markers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Diagnosing breast cancer comprises determining expression of nucleic acid molecules or expression products that are differentially expressed in normal and malignant tissue.
                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a

normal and tumour ECs. Tumour endothelial marker (TEM), normal endothelial marker (NEM), and pan-endothelial marker (PEM) genes are identified in human ECs. The human EC marker proteins and the polynucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are also useful for inhibiting neoangiogenesis or tumour angiogenesis, for inducing an immune response to tumour andiogenesis, for for identifying candidate drugs for treating tumours. The present for identifying candidate drugs for treating tumours. The present

```

The present invention describes an anti-angiogenic composition (I) for inhibiting expression of vascular endothelial growth factor (VEGF). (I) comprises an effective amount of a peptide inhibitor of marrix metalloprotesinase (WMP), where the peptide can inhibit the expression of VEGF. (I) has cytostatic, vulnerary, cardiant, cerebroprotective, antidiabetic, ophthalmological and dermatological activities. (I) can be used for inhibiting expression of VEGF, and so can be used for inhibiting growth of tumours and diminishing tumours size. The tumour can be metastatic, non-metastatic, vascularised, non-vascularised, hard or soft.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention comprises a crystalline form of a polypeptide corresponding to the catalytic domain of matrix metalloproteinase 9 (MMP9) protein - a gelatinase. The crystalline polypeptide of the invention is useful for treating a metalloproteinase mediated disease or condition in a warm-blooded animal. The crystalline polypeptide is also useful for determining the three-dimensional structure of the MMP9 catalytic domain to high resolution. The three-dimensional structure of the MMP9 catalytic domain is useful for rational drug design, and the atomic coordinates of the matalytic domain of MMP9 are useful for selecting or designing chemical modulators (preferably inhibitors) of MMP9. The crystalline polypeptide of the invention is useful in the treatment of a metalloproteinase mediated disease or condition, such as: tumour growth; metastasis in cancer; arthritis, osteoarchritis; atheroscierosis; restenosis; periodontitis; multiple sclerosis; glomerulonephritis; graft-
(I) is also useful for treating injuries including wounds, surgical incisions, chronic wounds, heart diseases and stroke. (I) is also useful for treating disorders characterised by excessive angiogenesis e.g. macular degeneration and diabetic retinopathy. The present sequence represents the human MMP-2 protein, which is used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; enzyme; crystalline polypeptide; matrix metalloproteinase 9; MMP9 gelatinase; metalloproteinase mediated disease; drug design; arthritis; three-dimensional structure; MMP9 inhibitor; tumour growth; cancer metaltasis; osteoarthritis; atherosclerosis; periodontitis; multiple sclerosis; glomerulonephritis; MMP9 modulator; graff-versus-host disease; non-insulin dependent diabetes; MMP2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel crystalline form of a polypeptide corresponding to the catalytic domain of matrix metalloproteinase 9 protein, useful for selecting or designing chemical modulators which are used for treating diabetes,

The inhibitors have peptide sequences related to the cleavage regions of the proenzyme forms of the MMPS. The peptide inhibitors are useful for stimulating callular proliferation of fibroblasts or keratinocytes, promoting healthy skin development, treating wounds, preventing scarring, improving skin tone, reducing wrinkling and for simulating the development of smooth, healthy skin. The peptide inhibitors are useful as anti-aging and wound healing compounds. The present sequence represents human MMP-2
versus-host disease; and non-insulin dependent diabetes. The present amino acid sequence represents a human matrix metalloproteinase 2 (MMP2)
                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; peptide inhibitor; matrix metalloproteinase-2; MMP-2;

Compounds which modulate the proteins of the invention may have cytostatic, antinflammatory, ophthalmological, antiatteriosclerotic or vulnerary activities. The sequences of the invention may be useful for gene therapy. The invention may be useful for gene therapy. The invention may be useful for gene therapy. The invention such as tumourigenesis, angiogenesis, apoptosis, inflammation, erythropoiesis or the biological response to hypoxia conditions erythropoiesis or the biological response to hypoxia conditions transportation, catecholamine synthesis, iron transport or nitric oxide synthesis The disease includes cancer, ischaemic conditions, reperfusion inflammatory conditions or wound healing. The present sequence is that of a disease related protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New substantially purified polypeptide, useful for diagnosing or treating a hypoxia-regulated condition, such as cancer, ischemia, reperfusion injury, retinopathy, pre-eclampsia, atherosclerosis, inflammation, or

contribute disease or arthritides. The method comprises occurining an autonomune disease or arthritides. The method comprises occuration agene expression using that that results in a gene expression signature to diagnose or analyse the autoimmune disease or arthritides in the patient, where gene expression of at least 60% of the genes correlates with that of the gene signature. The invention further comprises: a treatment of rheumatoid arthritis; identification of the genes for targeting in the treatment of rheumatoid arthritis in a mammal other than a mouse; diagnosis of rheumatoid arthritis; diagnosis or analyses of autoimmune disease or rheumatoid arthritis; screening the efficacy of a candidate drug in vitro for the treatment of collagendiduced arthritis, and reducing the symptoms associated with collagentinduced arthritis, and reducing the symptoms associated with collagentiduced arthritis, and reducing the symptoms are useful for arthrides and compositions of the present invention are useful for methods and compositions of the present invention are useful for fiscential arthritis, government disease caused by an infectious agent. This sequence represents a commune disease caused by an infectious agent. This sequence represents a protein sequence relating to the genes used in the analysis and treatment of autoimmune diseases or arthritides, such as an infections agent. This sequence is not shown and the specification. It has been supplied in an electronic format from

The present invention relates to the use of proteases to recruit stem cells from the niches they normally occupy. The invention is useful for recruiting adult stem cells for treating bone marrow failure disorder such as aplastic anaemia and myeloproliferative disorder such as multiple myeloma. The invention is also useful in gene therapy. The present sequence is human matrix metalloproteinase (MMP) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Recruiting adult stem cells in an animal for treating aplastic anemia or multiple myeloma by administering a protease or its activator so that the stem cells can proliferate, self-renew, differentiate or mobilize to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                             The present invention provides peptides and compositions containing such peptides that are useful as agents to maintain healthy skin and to promote the condition of the skin. The invention is useful for increasing the amount of fibronectin in itssue. The invention is also useful for encouraging the maintenance and development of healthy skin, preventing and treating wrinkles and for treating wounds. The invention acts as vulnerary and dermatological agents. The present sequence is human matrix metalloproteinase. 2 (MMP2) protein. This sequence is used in the

The invention relates to the use of a protease with defined specificity for the invention relates to the target substrate for preparing a medicament for the treatment of a specific disease related to the target substrate. The invention also relates to a pharmaceutical or diagnostic composition comprising one or diagnostically acceptable carriers, excipients and/or auxiliary agents, a method for cleaving a target substrate in vivo or in vitro comprising contacting the target substrate with a protease as cited in the use method for cleaving a target substrate in vivo or in vitro comprising contacting the target substrate with a protease as cited in the use mentioned, and a method for treatment of a disease in a patient connected with a specific target substrate and eliminates or the patient or a protease with defined specificity for the specific target substrate. The protease hydrolyzes the target substrate and eliminates or reduces one or more biological activities, physico-chemical properties of the target protein, and/or activates or increases one or more biological activities, physico-chemical properties of the target protein, and/or adds one or pharmacological properties of the target protein, and/or adds one or pharmacological properties of the target protein, and/or adds one or pharmacological activities, physico-chemical properties of the target protein. The protease may be administered to treat immune disorders, inflammatory disorders, cancers, hematological diseases, endocrine diseases, metabolic disorder, cancers, hematological diseases, generatourinary diseases, metabolic disorder, cancers, hematological diseases, generatourinary diseases, growth disorders, nutritional diseases, and infections. This sequence represents a polypeptide hydrolysed by a grown diseases or the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to the use of a protease with defined specificity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cell growth; pharmaceutical; cytostatic; metalloprotease 1 inhibitor; metalloprotease 2 inhibitor; metalloprotease 3 inhibitor; metalloprotease 4 inhibitor; metalloprotease 5 inhibitor; metalloprotease 6 inhibitor;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to a novel composition for inhibiting growth of chondrosarcoma cells comprising an amount of a peptide and a production chondrosarcoma cells comprising an amount of a peptide and a chondrosarcoma cells comprising an amount of a peptide and a compounds with a cytostatic activity acting as metalloprotease 1 inhibitors, metalloprotease 2 inhibitors, metalloprotease 3 inhibitors, metalloprotease 5 inhibitors, metalloprotease 9 inhibitors, metalloprotease 9 inhibitors, metalloprotease 10 inhibitors, metalloprotease 11 inhibitors, metalloprotease 11 inhibitors, metalloprotease 11 inhibitors, metalloprotease 12 inhibitors of metalloprotease 12 inhibitors, metalloprotease 13 inhibitors, composition is useful for decreasing and inhibiting the growth of chondrosarcoma cells which in turn inhibits in thibiting the growth of chondrosarcoma cells which in turn inhibits composition of a bone tumor or diminishes a size of a bone tumor, useful for treating chondrosarcomas and bone cancers. The present sequence is that of a human matrix metalloproteinse which may be used during the composition of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                A composition for decreasing and inhibiting the growth of chondrosarcoma cells, useful for treating chondrosarcomas and bone cancer, comprises a matrix metalloproteinase inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, and enrichtive or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a arrangle sequence that increases or decreases the expression of the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence comprision of a polynucleotide sequence which is differentially a subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound confidentifying a compound or small molecule that regulates the activity of one or more of the polypeptides given in the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating computates its activity is useful for preparing a medicament for treating conjugates its activity is useful for preparing a medicament for treating colypeptides or their antibodies. The polynucleotide or the compound injury (CCI) and spared nerve injury (SNI) in an animal (e.g. sphale sequence presented is a rat protein (shown in Table 2 of the reapph). The sequence presented is a rat protein (shown in Table 2 of the sequence data for this patent did not form part of the printed conjuding the patent did not form part of the printed conjuding patent did not form part of the printed conjuding patent did not form will not form will not specification, but was obtained in electronic form directly from WIPO at the printed conjuding patent did not form the printed conjuding patent did not form patent did not form directly from WIPO at the polynucleotid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention discloses a composition comprising two or more insurated rac derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal completed to pain, a method for identifying a compound which regulates the expression of the polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for identifying a compound that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polynucleotides or their antibodies. The polynucleotide or the compound that is mediates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: the specification) but was obtained in electronic form directly from WIPO at a specification.

This protein sequence comprises chicken matrix metalloproteinase-2 (chwMP-2). The invention relates to the discovery that angiogenesis is mediated by the specific vitronectin receptor alpha-v beta-3, and that inhibition of alpha-v beta-3 function inhibits angiogenesis. Claimed antagonists of alpha-v beta-3 include C-terminal fragments (see AAW1083-94) of human or chicken MMP-2. An MMP-2 fragment can be obtained by recombinant DNA methods, such as PCR amplification of the chwMP-2 coding region, cloning into e.g. pGEX-3X, and expression in E. coli as a fusion protein with glutathione-s-transferases. The antagonists can be used to inhibit angiogenesis in inflammed tissue (for treatment of arthritis or rheumatoid arthritis), in solid tumours or metastases (particularly to induce regression or inhibit tumour growth), and in ocular disorders such as diabetic retinopathy and macular degeneration, as well as to treat restenosis (all claimed)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Packaging material containing polypeptide antagonist of alphav, beta3 integrin - used for inhibition of angiogenesis, and for treating tumours,

The invention relates to a method of inhibiting angiogenesis in a tissue by the administration of a composition comprising an organic peptidomiment cantagonist of integrin alpha-V beta-3 virtonectin receptor). The integrin alpha-V beta-3 relations containing it are useful for inhibiting angiogenesis in a variety of medical conditions. The antagonist may be used to induce the regression of solid tumours or solid tumour metastases; to inhibit the growth of solid tumours undergoing neovascularisation; to treat inflamed tissue in which neovascularisation in retinal tissue (e.g., in rheumatoid arthritis); to treat neovascularisation in retinal tissue (e.g., in in diabetic retinopathy); to treat restenosis in a tissue by inhibiting smooth muscle cell migration (such as that which occurs following angioplasty); and to reduce the blood supply to a tissue required to support new growth of the tissue. The present sequence represents chicken matrix metalloprotease 2 (WMP-2, gelatinase) used in an example of the invention. Note: The
restenosis; smooth muscle cell migration; angioplasty; antiangiogenic; cytostatic; antiinflammatory; antiarthritic; antirheumatic; ophthalmological; antidiabetic; vasotropic; muscular-gen.; peptidomimetic; matrix metalloprotease 2; MMP-2; progelatinase; chicken;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Administration of composition comprising organic peptidomimetic alpha-v beta-3 antagonist to e.g. inhibit angiogenesis (inflamed tissue angiogenesis, retinal angiogenesis and tumor angiogenesis) in a tissue.
                                                                                                                                                                                                                                               'note= "This section is Asp-Ser-His-Phe in the chicken

The present invention describes isolated polynuclectide sequences (I), which encode polypeptides (II) with biological activity. Also described:

(I) a vector comprising (I); (2) an expression vector comprising (I); (3) a host cell genetically engineered to comprise (I) which is operatively associated with a regulatory sequence that modulates expression of (I) in comprising the polypeptide of (4) and a carrier; (6) an antibody directed against the polypeptide of (4) and a carrier; (6) an antibody directed against the polypeptide of (4); (7) detecting (I) or the polypeptide of (4) in a sample; (8) identifying a compound that binds to the polypeptide of (4) in a sample; (9) producing the polypeptide of (4); and (10) a collection of polymucleotides comprising at least one of the polymucleotide sequences (I) can be used as hybridisation probes, collegences or primers, for chromosome or gene mapping, for the recombinant production of proteins, and for generating antisense DNA or RNA. The present sequence represents a human contig polypeptide sequence, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        vulnerary; CNS-gen.; gene therapy; diagnostic; forensic; mapping; DNA purification; protein purification; osteoarthritis; antiarthritic; posteogathic; musculoskeletal disease; osteopathris; entiant disease; periodontal disease; antiinflammatory; mouth disease; burns; injury; peripheral neuropathy; Alzheimers disease; neuroprotective; nootropic; degeneration; parkinsons disease; antiparkinsonian; neurological disease; cerebrovascular disease; acebrorocective; vasotropic; cardiovascular disease; autoimmune disease; immunosuppressive; immune disorder; viral infection; virucide; infection; cancer;
                                                                                                                                                                                         New polynucleotides, useful as hybridization probes, oligomers or primers, for chromosome or gene mapping, for the recombinant production of proteins, and for generating antisense DNA or RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 708;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method of inhibiting angiogenesis in a tissue by the administration of a composition comprising an organic peptidomimetic antagonist of integrin alpha-V bata-3 (vitronectin receptor). The integrin alpha-V beta-3 artagonist and compositions containing it are useful for inhibiting angiogenesis in a variety of medical conditions. The antagonist may be used to induce the regression of solid tumours or solid tumours or solid tumours or solid tumours or solid tumours containing in retains (e.g., in rheumatoid arthritis); to treat neovascularisation in retinal tissue (e.g., in diabetic retinopathy); to treat restenosis in a tissue by inhibiting smooth muscle cellungation (supply to a tissue required to support new growth of the tissue. The present sequence represents chicken matrix metalloprotease 2 (MMP-2, gelatinase) used in an example of the invention. Note: The present sequence residues 202-205 compared to the sequence also described as chicken MMP-2 shown in the sequence listing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   biological activity; genetic engineering; hybridisation probe; oligomer;

The invertion describes a new isolaters polymeracioning a comparison with biological activity comprising: a nucleotide sequence of contributions; or a nucleotide sequence of (i) under stringent hybridization conditions; or a nucleotide sequence of (i), under stringent hybridization conditions; or a nucleotide sequence of (i), also described are: a(n) (expression) vector comprising (i); a host cell genetically engineered to comprise (I) operatively, associated with a regulatory sequence that modulates expression of the polymucleotide in the host cell; an isolated polymetide comprising a sequence of SEQ ID NOS: 568-1134 (fully defined), where the polymetide comprising a sequence of SEQ ID NOS: 568-1134 (fully defined), where the polymetide comprising the polymetide encoded by (I); or a polymetide of (3); and a carrier; an antibody directed against the polymetide of (3); and a carrier; an antibody directed against the polymetide of (3); and a carrier; an antibody directed against the polymetide of (3); and a collection of polymetide of polymetide of (3); and a collection of polymucleotides, where the collection comprising of at collection of polymucleotides, where the collection comprising of at class one of SEQ ID NOS: 1-567. (I) is a polymetide with biological activity, which comprises any of the amino acid sequence of SEQ ID NOS: 1-567 encoding a polymetide with biological activity, which comprises any of the amino acid sequence of SEQ ID NOS: 1-567 encoding a polymetic of sequences of SEQ ID NOS: 1-567 encoding a polymetic of sequences of sequences and methods are useful in diagnostics, forensid; and generic of the mapping, in identifying of mutations responsible for generic disorders or chief raits, in assessing biodiversity, and for producing ageneric or sequences. The mapping of the man products dependent on DNA and encode and agenerating or dependent or producing ageneration or produces and agenerating or produc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              composition and method are useful for treating a disease or disorder, e.g. osteoporosis, osteoarthritis, periodontal disease, burns, CNS and peripheral disease, Alzheimer's disease, Parkinson's disease, stroke, autoimmune disorders, viral infection, or cancer. This is the amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polynucleotide encoding a polypeptide with biological activity, useful for treating a disease or disorder, e.g. osteoarthritis, burns, CNS and peripheral disease, stroke, autoimmune disorders, viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       invention describes a new isolated polynucleotide (I) encoding a

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain creaction (PRR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed control of (II) are to treat disease states involving (II). (II) is cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a colympostide in tissue, as molecular weight markers and as a food of sites expressing (II). (I) and (II) are useful for treating disorders (involving aberrant protein expression or biological activity. The colony-peptide and polymucleotide sequences have applications in diagnostics, forsensics, gene mapping, identification of mutations creponable for genetic disorders or other tratte to assess blodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this camino acid sequences of the invention. Note: The sequence data for this electronic format directly from WIPO at the parent did not appear in the printed specification, but was obtained in colony to the control of the colony of the sequences of the invention of the colony 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  us-us-us-ys-use, 1937,

patent No. 681239

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

FILE REPERENCE: CLOO1307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT PILING DATE: 2000-04-14

PRIOR PILING DATE: 2000-10-20

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FastSEQ for Windows Version 4.0

                                                                                                                                                                                                                                                                                                      Sequence 6512, Application US/09949016

Sequence 6512, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

CURRENT FILING DATE: 2000-04-14

PRIOR FILING DATE: 2000-10-20

PRIOR PELICATION NUMBER: 60/241,755

PRIOR PELICATION NUMBER: 60/231,498

PRIOR PILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

SETOR FILING DATE: 2000-10-03
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

A;Title: Sequence and analysis of chromsome 1 of the plant Arabidopsis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            matrilysin (EC 3.4.24.23) precursor - human
N;Alternate names: matrin; matrix metalloproteinase 7 (MMP7); probable metalloproteinase
N;Contains: promatrilysin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Cross-references: UNIPROT:004529; UNIPARC:UP100000A9048; GB:AE005173; NID:92194124; PI

interstitial collagenase (EC 3.4.24.7) precursor - rabbit
interstitial collagenase (EC 3.4.24.7) precursor - rabbit
NiAlternate names: fibroblast collagenase; matrix metalloproteinase 1 (MMP1); tissue col.
C.Species: Oryctolagus cuniculus (domestic rabbit)
C.Date: 30-Sep-1992 #sequence_revision 30-Sep-1992 #text_change 09-Jul-2004
C.Accession: A27500; B27500; I46694
B.C.Accession: A27500; B27500; IM.; Mayer, A.S.; Gross, R.H.; Brinckerhoff, C.E.
Biochemistry 26, 6156-6165, 1987
A;Title: A gene for rabbit synovial cell collagenase: member of a family of metalloprote: A;Reference number: A27500
A;Accession: A27500

C; Comment: Procollagenase can be activated without removal of the activation peptide. Stition peptide by other proteinases.
C; Comment: Procollagenase is found in glycosylated and unglycosylated forms, both of whice; Function:
                                                                                                                                                                                                                                                                                                                                                                                                                    A; Description: hydrolyzes collagens, in particular types I, II, III, and X, serpins, and A; Description: hydrolyzes type X collagen, serpins, and alpha-macroglobulins C; Superfamily: interstitial collagense; hemopexin repeat homology; matrix metalloproteir C; Keywords: calcium; extracellular matrix; fibroblast; glycoprotein; hydrolase; metalloproteir E; 1-19/Domain: signal sequence #status predicted <SIG> F; 20-469/Product: procollagenase #status predicted <PRO> F; 20-99/Domain: activation peptide #status experimental <ACT> F; 60-261/Domain: activation peptide #status experimental <ACT> F; 100-469/Product: interstitial collagenase #status predicted <MAT>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    C;Accession: JC5743

A;Title: Molecular cloning and mRNA tissue distribution of a novel matrix metalloproteins

A;Reference number: JC5743; MUID:97149288; PMID:8996096
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    C. Comment: This enzyme plays a role in enamel biomineralization and development.
C. Superfamily: interstitial collagenase; hemopexin repeat homology; matrix metalloproteir C. Keywords: hydrolase; metalloproteinase; zinc
F:1-22/Domain: signal sequence #status predicted <SIG>
F:23-483/Product: matrix metalloproteinase #status predicted <MAT>
F:68-271/pomain: matrix metalloproteinase homology <MMP>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A,Molecule type: mRNA

A. Title: Porcine collagenase from synovial fibroblasts: CDNA sequence and modulation of A; Recession: 815986; MUID: 91333421; PMID:1651440

A. Michards compared with conceptual translation

A. Michards in not compared with conceptual translation

A. Michards in the sequence, including the amino end of the proenzyme, was confirmed by A; Cross-references uniPROT: P21692; UNIPARC:UPI000012F23A

A. Mode: part of the sequence, including the amino end of the proenzyme, was confirmed by R; Clarke, N.J.; O'Hare, M.C.; Cawston, T.E.; Harper, G.P.
